

## SCRUMAgI - Successful Scrum Project Delivery

**Duration:**

**3 days**

**Points:**

**PDU: 24**

Scrum has been around since 1995 and is supporting the Agile Values and Principles since 2001. This course will teach you about Agile and how the Scrum Approach is supporting Agile in all aspects. It will lay out all the steps of running an Agile / Scrum project through lecture and several hands-on case studies where you will practice what you learned.

Reading about Scrum is one thing, developing a project Vision, breaking down Features, writing actual stories and performing sprint planning and sprint review in a case study scenario is something completely different. Performing Capacity planning and ensuring that the team can commit to the correct number of story points and complete and deliver all the identified tasks.

That is what this course is all about.

You will review real life examples and techniques that have been successfully used by many large organizations in the world. All aspects and steps of the Scrum Project Life Cycle will be covered. Get ready for a very dynamic and interactive course.

### Who the course is for

- Product Owners
- Business (System) Analysts (BSA or BA)
- Scrum Masters
- Senior IT Project Managers
- IT Specialists
- Agile Team Members
- IT Program Managers
